

Secure. Simple. Affordable

Total Business Backup from GLC Secure Cloud Online Backup.

Backup PCs, Laptops & Servers

-  **Backup & Recovery for MS Exchange**
Protect files and folders securely in the cloud.
-  **Backup & Recovery SQL and SharePoint**
Protect files and folders securely in the cloud.
-  **Total Endpoint Protection**
Protect files and folders securely in the cloud.
-  **Bare Metal Backup & Recovery**
Protect system state and application data with full bare metal backups.
-  **Centralized Management**
Control, Report and Deploy on your company's backups
-  **Unlimited Laptop & PC Backup**
Backup as many PCs and laptops as needed with a single software application.

GLC Secure Cloud is the total cloud backup solution for business. This business server backup suite provides backup and recovery for *SQL servers, Exchange servers, SharePoint servers, fileservers, workstations, and laptop fleets*. It is a cost-effective complete business backup solution managed via one portal, **Pulse Centralized Management**.

Military Grade Security

GLC Secure Cloud's three-tiered security system provides complete data security and privacy protection. The level of encryption used by GLC Secure Cloud is frequently used by the US military. GLC provides an additional encryption option called UltraSafe™. UltraSafe encrypts your data with a password that only you can ever access.

Data secured by **GLC Secure Cloud** goes through the following three-tiered encryption process:

- Locally encrypted at 256AES
- In transit at 128bit SSL
- At the data center at 1024bit AES
- At the point of log in with UltraSafe™

Bare Metal ImageCreator

GLC ServerSave's comprehensive server backup software suite includes Bare Metal ImageCreator.

ImageCreator seamlessly generates bare metal images for all of your large server files and machines. These backups will be available for recovery on dissimilar hardware.

The complimentary feature to ImageCreator is ImageStream.

ImageStream sends your bare metal backups to the GLC cloud, where they are protected by military-grade encryption and bulletproof data center security.

GLC ServerSave's Bare Metal ImageCreator will back up the following servers and machines:

- **Windows servers** (2003, 2008, SBS 2003, SBS 2008)
- **SQL servers** (2005, 2008, and 2010)
- **SharePoint servers** (2008 and 2010)
- **Exchange servers** (Exchange 2000, Exchange 2003, Exchange 2008, and Exchange 2010)
- **Full local machines** – All operating systems, system state, program, and application files
- **Transactionally consistent backups** – Application aware backup synchronized to create bare metal backup images only when database transactions are complete.

Bare metal backups done with GLC ServerSave are transactionally consistent, as opposed to crash consistent. After the base image file is created, GLC ServerSave continues to backup your bare metal images. Incremental image files are created and updated as changes are detected. As with all GLC Secure Cloud products, we GLC ForeverSave protects your data from human error with unlimited versioning, automatic and infinite archiving.

Online Backup & Recovery Manager

Bare Metal ImageStream is specifically designed for server backup strategies. ImageStream is modeled after GLC Secure Cloud's award winning online backup software and is quick to get up and running.

Bare Metal ImageStream sends your bare metal images to the cloud securely. GLC ServerSave uses military-grade encryption to protect business data locally, in transit, and at rest in the data center.

ImageStream employs GLC Timeline Recovery, allowing the user to scroll through a simple calendar interface, back in time and restore any version of any bare metal backup file. GLC Timeline Recovery works in conjunction with GLC ForeverSave, ensuring that an unlimited number of file versions are available for recovery, and that all files are automatically and infinitely archived.

Once your bare metal backup is at rest in the data center, it will be available for restoration on dissimilar hardware, anywhere at any time. In storage, data will be protected by biometric credential requirements, 24/7 watch, and automatic geographic redundancy.

Windows Server Backup and Recovery

GLC ServerSave performs bare metal backup and recovery of Windows Servers. Use Bare Metal ImageCreator to generate the Windows Server bare metal backup and send it safely to the GLC cloud with Bare Metal ImageStream.

GLC ServerSave backs up and restores Windows Servers 2003, 2008, SBS 2003, and SBS 2008. Additionally, GLC ServerSave backs up and restores full local machines – all operating systems, system state, program, and application files.

Windows Server backups are stored safely in the GLC cloud. GLC has 11 military-grade data centers worldwide. All backups are protected by three-tiers of encryption: first locally, then in transit, and finally "at rest" in the data center.

SharePoint Server Backup and Recovery

Bare metal backup and recovery of SharePoint servers is fast, easy, and secure. GLC ServerSave's Bare Metal ImageCreator will create a base bare metal image file of the SharePoint server and continue to make incremental image files when changes are detected.

GLC ServerSave backs up and restores SharePoint servers 2008 and 2010. Use GLC ForeverSave and GLC Timeline Recovery to restore to any version of any bare metal image file at any point in time. GLC does not limit the amount of time your backups are accessible.

SharePoint Server back ups are stored safely in the GLC cloud at one of our 11 military-grade data centers.

Exchange Backup and Granular Recovery

GLC ServerSave's Exchange Backup and Granular Recovery gives IT departments the ability to perform full Exchange database backup and recovery. Restoration is flexible. Exchange server items can be restored onto the production Exchange Server and mailboxes can be restored directly from EDB files.

Exchange Backup and Granular Recovery are available for Exchange servers 2000, 2003, 2008, and 2010.

Data loss is most commonly caused by human error, specifically, deletion. GLC ServerSave provides granular restore capabilities. Restore mail, mail items, messages, contacts, public folders, attachments, calendar items and more. Electronic discovery is included in GLC ServerSave. Use this tool to search across mailboxes, and mail items and export restored items to a PST file.

A variety of flexible recovery options leverage the power of Exchange Granular Recovery. The administrator will not be forced to perform a full database and brick-level backup if it is not necessary. However, full Exchange database backup and recovery is available. Though if necessary, full Exchange database backup and recovery is available.

Server migration is fast and simple with GLC ServerSave's Exchange Backup and Granular Recovery - Simply copy mailbox items to the new server using the Mailbox Creation Wizard.

SQL Server Backup and Recovery

GLC ServerSave performs full bare metal backup and recovery for **SQL servers**. SQL databases often contain highly sensitive information that is constantly changing. In order to eliminate errors during the backup process, GLC ServerSave's bare metal backup technology is transactionally consistent. Transactionally consistent bare metal backups are synchronized with the applications that are being backed up. Snapshots are only taken when database transactions are complete. This is in opposition from crash consistent backup, which does not ensure that applications are aware they are being backed up..

GLC ServerSave backs up **SQL servers 2005, 2008, and 2010**.

GLC ForeverSave, GLC Timeline Recovery, and unlimited versioning capabilities ensure that restorations are simple and complete. Files will be automatically and infinitely archived. Unlimited versions of files will be available with GLC Timeline Recovery. Unlike competitors, GLC does not limit the time in which you have access to data.

SQL server backups are stored safely in the GLC cloud at two of our 11 military-grade data centers.

Boot Disk

GLC ServerSave allows IT departments to create boot disks at any given time, should an emergency restore from such a disk be necessary. This boot disk can be created for any machine or server; including system state data, programs, and app state data. Bare metal images can be restored on dissimilar hardware.

Mobile Management

GLC knows that IT managers and consultants may require access to workstation, server, and client data in any place and at any time. This understanding led GLC ServerSave to offer flexible access to data through native apps and any web browser-offering device.

Our flexible access allows you to share, browse, access, view, and stream on any device with a browser. GLC ServerSave comes packaged with native apps for iPad, iPhone, and Android. Access, view and share the individual files and folders that have previously been backed up on the workstation.

Whether you're accessing your data with your Android, iPhone, or browser, it will always be secure in the GLC cloud.

GLC ForeverSave

GLC Secure Cloud has applied its award winning technology to GLC ServerSave. One of the many benefits of these programs share is GLC ForeverSave. GLC ForeverSave automatically and infinitely archives your files and does not limit which backups are accessible for recovery. All backed up data will be available, forever.

GLC ServerSave is designed to protect your data forever and allow you to recover it at any time. The GLC Timeline Recovery calendar allows you to select a date in the past from which to recover data backup was performed will be instantly recoverable from that specific date.

Flexible Scheduling

Your Online Backup with Flexibility

With GLC ServerSave, you have the flexibility to schedule hourly, daily, weekly, or monthly backups. Choose the files, folders, servers and workstations that need to be backed up for these respective sessions. Instead of running constantly, taking up valuable CPU and RAM resources like other online backup systems, GLC runs when you schedule it and when a file change is detected, keeping you safe and optimizing PC performance.

Unlimited Version Archive

Keep an unlimited version history of all of your files, including your bare metal backup images. Roll back your SQL databases to last year's backups if you wish. Use the GLC Timeline Recovery feature to go back to the date of your choosing and restore your backup from that date. GLC ServerSave provides this function in standard file and folder online backup and recovery, as well as in ImageStream.

Backup PCs & Laptops

Backup Unlimited PCs Online

GLC lets you backup as many computers as you need using one account. With GLC, all of the PCs in your business are simply managed; no juggling multiple accounts! And because we don't charge you a separate amount for each PC, GLC is the most affordable way to back up your business.

Schedule Your Online Backup with Complete Flexibility

With GLC Secure Cloud, you have the flexibility to schedule monthly, weekly, daily or hourly backup. You also have the ability to perform an instant backup. Instead of running constantly, taking up valuable CPU and RAM resources like other online backup systems, GLC runs when you schedule it, keeping you safe and optimizing your PC's performance.

Access Your Backed Up Files on the Web

All data you have backed up can be accessed from any browser! Because your data is being backed up to the GLC cloud, you can access your data anywhere in the world by simply getting online. Never be without a critical file again

Share Your Backed Up Files Online

With **GLC Secure Cloud**, any of the files that you've backed up can be shared simply – all you need is an email address. Never have a large attachment bounce again. Select as many files as you'd like to share with friends and colleagues. If you're a home user, share photos or videos with ease

Select Which Files to Backup Online

With **GLC So Simple File Select**, you can specify to GLC what type of files to back up. Select picture files, movie files, document files, or anything else. SoSimple File Select makes sure the right data is protected in the simplest way possible.

GLC Stores Unlimited Versions of Your Online Backup

Keep an unlimited version history of all your files. Roll back your books to last year's tax records if you wish. Use our time machine feature to go back to the date you want to restore your backup as of and recover that snapshot of files & versions.
